

The Joie of Seating

Custom Seat Mounting Guidelines (NASCAR Divisions)

All seats are mounted differently due to drivers preferences.
However, these tips are to help you mount your seat the safest way.

**3 different Mounting Points – Make sure to use only
3/8" Grade-8 Bolts, heavy duty large hardened flat
washers and lock nuts at all mounting points**

*To start place the seat in the car and position
to your most comfortable position.

*We have welded bung holes in 3
different locations for mounting purposes.
Start with the 3 holes in the top back of the
seat. Make a ¼" aluminum or steel 90 degree
bracket, attach with 3/8" bolts.

**Use only 3/8"
Grade-8 bolts**

*For hip mounts and front side mounts in
the seat use (2) ¼" aluminum or steel
brackets welded to chassis in each location
and attach with bolts, nuts and washers to
the 2 bung holes provided.
